Experiment No.4
Experiment on Hadoop Map-Reduce
Date of Performance:07-09-23
Date of Submission:14-09-23

AIM: To write a program to implement a word count program using MapReduce.

THEORY:

WordCount is a simple program which counts the number of occurrences of each word in a given text input data set. WordCount fits very well with the MapReduce programming model making it a great example to understand the Hadoop Map/Reduce programming style. The implementation consists of three main parts:

1. Mapper
2. Reducer
3. Driver

Step-1. Write a Mapper

A Mapper overrides the `map()` function from the Class "org.apache.hadoop.mapreduce.Mapper" which provides <key, value> pairs as the input. A Mapper implementation may output <key,value> pairs using the provided Context .

Input value of the WordCount Map task will be a line of text from the input data file and the key would be the line number <line_number, line_of_text> . Map task outputs <word, one> for each word in the line of text.

Pseudo-code

```
void Map (key, value){  
  for each word x in value:  
    output.collect(x,1);  
}
```

Step-2. Write a Reducer

A Reducer collects the intermediate <key,value> output from multiple map tasks and assemble a single result. Here, the WordCount program will sum up the occurrence of each word to pairs as <word, occurrence>.

Pseudo-code

```
void Reduce (keyword, <list of value>){  
  for each x in <list of value>:  
    sum+=x;
```

```
final_output.collect(keyword, sum);  
}
```

CODE:

```
import java.io.IOException;  
import  
java.util.StringTokenizer;  
import org.apache.hadoop.io.IntWritable;  
import  
org.apache.hadoop.io.LongWritable;  
import org.apache.hadoop.io.Text;  
import org.apache.hadoop.mapreduce.Mapper;  
import org.apache.hadoop.mapreduce.Reducer;  
import org.apache.hadoop.conf.Configuration;  
import org.apache.hadoop.mapreduce.Job;  
import org.apache.hadoop.mapreduce.lib.input.TextInputFormat;  
import org.apache.hadoop.mapreduce.lib.output.TextOutputFormat;  
import org.apache.hadoop.mapreduce.lib.input.FileInputFormat;  
import org.apache.hadoop.mapreduce.lib.output.FileOutputFormat;  
import org.apache.hadoop.fs.Path;  
public class WordCount  
{  
    public static class Map extends Mapper<LongWritable,Text,Text,IntWritable> {  
        public void map(LongWritable key, Text value,Context context) throws  
        IOException,InterruptedException{  
            String line = value.toString();  
            StringTokenizer tokenizer = new StringTokenizer(line);  
            while (tokenizer.hasMoreTokens()) {  
                CSL702: Big Data Analytics Lab
```

```
value.set(tokenizer.nextToken());

context.write(value, new IntWritable(1));
}

}

}

public static class Reduce extends Reducer<Text,IntWritable,Text,IntWritable> {
    public void reduce(Text key, Iterable<IntWritable> values,Context context)
        throws IOException,InterruptedException {
        int sum=0;
        for(IntWritable x:
            values)
        {
            sum+=x.get();
        }
        context.write(key, new IntWritable(sum));
    }
}

public static void main(String[] args) throws Exception
{
    Configuration conf= new Configuration();
    Job job = new Job(conf,"My Word Count Program");
    job.setJarByClass(WordCount.class);
    job.setMapperClass(Map.class);
    job.setReducerClass(Reduce.class);
    job.setOutputKeyClass(Text.class);
    job.setOutputValueClass(IntWritable.class);
    job.setInputFormatClass(TextInputFormat.class);
    job.setOutputFormatClass(TextOutputFormat.class);

    Path outputPath = new Path(args[1]);
    CSL702: Big Data Analytics Lab
```

```
//Configuring the input/output path from the filesystem into the job
FileInputFormat.addInputPath(job, new Path(args[0]));

//Configuring the input/output path from the filesystem into the job
FileInputFormat.addInputPath(job, new Path(args[0]));

FileOutputFormat.setOutputPath(job, new Path(args[1]));

//deleting the output path automatically from hdfs so that we don't have to
delete it explicitly
outputPath.getFileSystem(conf).delete(outputPath);

//exiting the job only if the flag value becomes false
System.exit(job.waitForCompletion(true) ? 0 : 1);

}

}
```

The screenshot shows an IDE with the following project structure:

- WordCount (C:\Users\admin\IdeaProjects\WordCount)
 - src
 - main
 - java
 - org.samarth
 - WC_Mapper
 - WC_Reducer
 - WC_Runner
 - resources
 - test
 - pom.xml
 - External Libraries
 - Scratches and Consoles

The main editor displays the `WC_Runner.java` file with the following code:

```
2 import java.io.IOException;
3 import org.apache.hadoop.fs.Path;
4 import org.apache.hadoop.io.IntWritable;
5 import org.apache.hadoop.io.Text;
6 import org.apache.hadoop.mapred.FileInputFormat;
7 import org.apache.hadoop.mapred.FileOutputFormat;
8 import org.apache.hadoop.mapred.JobClient;
9 import org.apache.hadoop.mapred.JobConf;
10 import org.apache.hadoop.mapred.TextInputFormat;
11 import org.apache.hadoop.mapred.TextOutputFormat;
12 import org.apache.hadoop.mapred.TextOutputFormat;
13
14 public class WC_Runner {
15     public static void main(String[] args) throws IOException{
16         JobConf conf = new JobConf(WC_Runner.class);
17         conf.setJobName("WordCount");
18         conf.setOutputKeyClass(Text.class);
19         conf.setOutputValueClass(IntWritable.class);
20         conf.setMapperClass(WC_Mapper.class);
21         conf.setCombinerClass(WC_Reducer.class);
22         conf.setReducerClass(WC_Reducer.class);
23         conf.setInputFormat(TextInputFormat.class);
24         conf.setOutputFormat(TextOutputFormat.class);
25         FileInputFormat.setInputPaths(conf, new Path(args[0]));
26         FileOutputFormat.setOutputPath(conf, new Path(args[1]));
27         JobClient.runJob(conf);
28     }
29 }
```

The screenshot shows a Command Prompt window with the following commands and output:

```

CONCLUSION:

Creating a word count program using Map-Reduce entails splitting the task into two key functions: the Map function, which dissects and produces key-value pairs, and the Reduce function, which consolidates and tallies the words. Hadoop's Map-Reduce framework adeptly handles substantial datasets through distributed processing.
